

## Top 5 Tips for Easily Enrolling Your Family in the NKF Patient Network – Alport Syndrome

[Click Here to Enroll Today](#)

### 1) One email address does it all!

You can enroll yourself and/or one or more children with Alport syndrome all with the same email address. If you are a patient who has already enrolled with your own information and would also like to enroll your child/children - or if you are not a patient but are enrolling multiple children with Alport syndrome – this can all be done using a singular email address.

### 2) Add: [nkfpatientnetwork@healthie.net](mailto:nkfpatientnetwork@healthie.net) to your contacts!

When you first complete the screening questions, the confirmation email will come from this email address and may automatically get filtered into your junk mail. Adding this email address to your list of contacts will help make sure you receive all the important info about the registry and notifications when it is time to update your information.

### 3) Steps to adding a child/multiple children using the same profile:

Once you have activated your account and created a log-in through the initial screening questions, look for the name of the person you are registering (yourself/your child) on the menu bar at the top of the main dashboard page. By clicking the name of your registrant, a dropdown menu will appear. The dropdown includes the option to “add participant.” By selecting this option, you can add each child with Alport syndrome as appropriate. If you enrolled your child/children first, this is where you can return to add yourself as a patient if appropriate. Now, you and/or your child/ren will all be in one shared profile using the same email address. You can also use this menu to switch from one participant to another to view or add new information.

### 4) Note: The initial consent form is several pages long.

Your privacy rights are important and detailed. All information you provide is deidentified. If enrolling a child in the registry, you will need to sign a second consent form or the child’s electronic consent may be required based on age. The platform uses “DocuSign” to generate electronic signatures for your use.
